Illusion
let's make your own dream
without NAPZA

Green Mission
Makes The World Better
Bergerak kita tinggalkan rasa peduli
tentunya lingkungan tanpa mengabaikan
peribadi dan sosial
KADER LINGKUNGAN

CHIMPANZEE

The chimpanzee is an intelligent and fun creature. It can learn and solve problems. Many chimpanzees learn to do things like human activities such as using tools, playing, and making simple drawings. Chimpanzees also use their hands to make an alphabet to communicate with humans using sign language.

As one of the few chimpanzees that can walk upright on a hill or stand in a tree, like their big cousins, they can use the same tool for several things. During the wet season, it makes a stick to use to dig for termites, but in other seasons it breaks the sticks to use as a spear.

The chimpanzee's food consists of mainly leaves, roots, and fruits. After an early morning meal, it spends most of the day picking up fallen fruit or leaves, but in seasons it can reach it all over the forest at the end of the afternoon. The chimpanzee also eats some insects such as ants and termites or even small birds. If it finds a nest of wild bees, it will use its long tail to climb to eat their honey.

The number of chimpanzees living in a group varies from 10 to 150 depending on the season. It remains dependent on the season. In the winter of the forest, it will spend most of the time alone or with a few others in the same area. Then, when it is right to have more, it will come to you to get food for themselves, and to be part of a group member of the forest.

Food that you eat everyday

You need more for more meals. You need food to make you full. You need food to satisfy hunger. Your stomach feels hungry when you need to eat more food. Your body needs food to make energy. Every part of your body uses energy to do things. Your brain uses energy to think. Your heart uses energy to pump blood. Your muscles use energy to move. Growth requires food. Your body also needs energy from food to stay warm. Eating the right kinds of foods can help keep you healthy. Eating certain foods can help prevent some diseases.

The human body is 80 percent water. When you get up every day, your body needs water to stay hydrated and to do the things in your body. Water helps your body get rid of wastes through urination and sweat. Water also helps your body absorb nutrients from food. You need water to keep your body healthy. You need water to keep your body hydrated. Drinking clean water can help prevent some diseases.

You need all kinds of foods to make your body strong and healthy. You should eat eggs, fish, chicken, and other animal products. You should also eat fruits, vegetables, and grains. You need to eat grains of fruits and vegetables every day. But you should also eat some foods with less fat and sugar.

You need all kinds of foods to make your body strong and healthy. You should eat eggs, fish, chicken, and other animal products. You should also eat fruits, vegetables, and grains. You need to eat grains of fruits and vegetables every day. But you should also eat some foods with less fat and sugar.
