

# Susanto Benny

Mobile Application Developer / UI Designer

I've been a mobile application developer and UI designer for 3 years, although for some people these are two complete different world, but not for me. I enjoyed creating application that people could use and make sure to create a good looking one.

I am creative and enthusiastic worker. I always look forward to learn and explore new things. Eager to learn and adapt in a new environment. With a Bachelor degree in Information Technology and my previous working experience, I have knowledge about agile software development lifecycle, how to work in a team, and how to write neat codes.
